

POLYAID

Since its inception, Polyglobal has been concerned about the environment and being a socially responsible company. With this in mind, our production facilities have the best and most efficient recovery technology systems. They wash down gases and recycle water.

Due to our efforts we have achieved the clean industry certification awarded by PROFEPA (Federal Office for Environmental Protection) this distinction allows us to offer an excellent product and 100 % reliable, in terms of sustainability.

Mexican environmental audits have been the subject of various surveys in North America. Many official statements have been declared, but a revealing factor is that US insurance and financial institutions have begun to demand that companies located in Mexico requesting services, have certifications that they are in the audits of the PROFEPA program.

That and other signals that the market itself is acknowledging the efforts of companies in the Mexican environmental audit, allow the possibility of establishing tri-national recognitions. Meaning, a company which obtained the clean industry certificate issued by the Mexican Government (along with companies in Canada or the USA through equivalent examinations) would automatically have access on a North America stamp, allowing their products to be identified in international markets as a result of cleaner production processes.

It is also important to discuss that in recent dates, at Pack Expo 2009 in Vegas Nevada, Polyglobal was recognized as a sustainable company.

Subsequently Polyglobal launched its POLYAID program with the purpose of collecting the scrap material generated by customers to transform Polyfoam and Insufoam to recycle them, and thus ensure that these unsorted scraps do not end up in municipal waste dumps where it takes up to 150 years to decompose becoming pollutants in the environment. This recycling generates by-products that are sold in the market as recycled material. To qualify for this collection program the material has to comply with a number of measures to ensure it not contaminated. For details about POLYAID please contact your customer service executive.
