

1.- PRODUCT IDENTIFICATION

Nombre: Polycarton

Sinónimos: Corrugated cardboard with polyethylene foam on one side

Proveedor: Polyglobal México

Tel: (52) 55 5255 6000

Fax: (52) 55 5250 8527

2.- HAZARDOUS INGREDIENTS / IDENTITY

N / A

3.- HAZARDS IDENTIFICATION

- Appearance and odor - Flat surface, color variety, and odorless
- Exposure effect - Eye and skin irritation, mucous membrane, coughing and choking in case of a fire.
- Exposure through severe conditions - It is not toxic

The components are not considered with adverse effects, they do not cause specific symptoms and are not considered carcinogenic, mutagenic or lethal.

4.- FIRST AID PROCEDURES

- Acute exposure: In case of a fire, eye and skin irritation, mucous membrane, coughing and choking.

- Chronic exposure: It can cause skin damage while converting. Wash and sanitize the wound.

- Inhalation: In case of fire, stand where there is fresh air. Administrate first aid correspondings if breathing stops.

- Eyes: Conversion process can generate dust, causing wounds. Use safety glasses. Provide medical care.

- Skin: It can cause injury handling while converting.

- Ingestion: When it is not combined with other substances, rolls are non - toxic

5.- MEASURES AGAINST FIRES

- Burning Point 220°C

Procedures against fires

- Extinguish fire with plenty of water
- A fire extinguisher Type A may be used

- Make sure the ashes are completely extinguished; this will prevent fire to restart.
- Keep the area clear.
- Restrict unnecessary access in the area.

- Auto breathing equipment is recommended.

Equipment for personal Protection

- Jacket against fires
- Gloves
- Boots
- Helmet with face mask

Hazard of fire and explotion

It does not present any special risks

6.- ACCIDENTAL SPILL MEASURES

N / A

7.- STORAGE AND HANDLING FOR DIFFERENT PRESENTATIONS

The ideal storage conditions are 23°Celsius and 45% relative humidity, therefore it is recommended that our products should be stored in its original wrapper up to the time its use; this will reduce substantially the problems associated with absorption or emission of moisture to be balanced with the user roll. It is important that when you use only a roll or some sheets from the dais, the remaining should be palletized to avoid humidity absorption.

The coil should be stored resting on one of the flat ends. The corrugated sheets should be placed on the floor to avoid flutes deformation. It is important that the material is not exposed to more than 38°Celsius, or to the sun light directly, this could cause losing moisture and present cracking problems in machines. It is important not rolling the coils through rough surfaces or those that can cause rupture on them. It is important to transport material in pallets. Do not let the material hits de floor.

8.- CONTROL OF EXPOSURE / PERSONAL PROTECTION

Use basic personal elements for protection.

Follow storage recommendations and its management for optimal performance.
