

Only the best materials
with the latest technology

Polyliner is a flexible material, compatible with many products. It is chemically and mechanically resistant, making it a versatile product since it can be cut to measurements easily. It can be used in several industries such as floors, carpeting and bottle caps.

In the carpet industry, Polyliner is used as an underlay for cushioning and leveling as well as an acoustical barrier.

Advantages:

- Adds support, improving the stability and increasing the life of the carpet
- Improves the softness and cushioning for the comfort of the end user
- Isolates noise, from upper to lower levels in apartments
- Hides imperfections on the floor and isolates humidity
