

Only the best materials with the latest technology

Polyboard is extruded polyethylene foam that is solid and without lamination. It can be used in many different applications such as product cushioning, manufacturing of sports and flotation goods, insulation and packaging of heavy objects.

Advantages:

- Excellent choice for most packaging and protection purposes
- Excellent shock and vibration protection
- Better resistance to compression
- Non-abrasive
- Easier and more precise fabrication of packaging components
- Cost reductions when compared to traditional packaging solutions, such as wood or metal
- State of the art product manufactured by few companies in the world produce
- 100% Recyclable

It's available in a range of densities, making it a versatile product.

* Multidensity lamination is available for Polyboard as well as Polylam
