

Only the best materials
with the latest technology

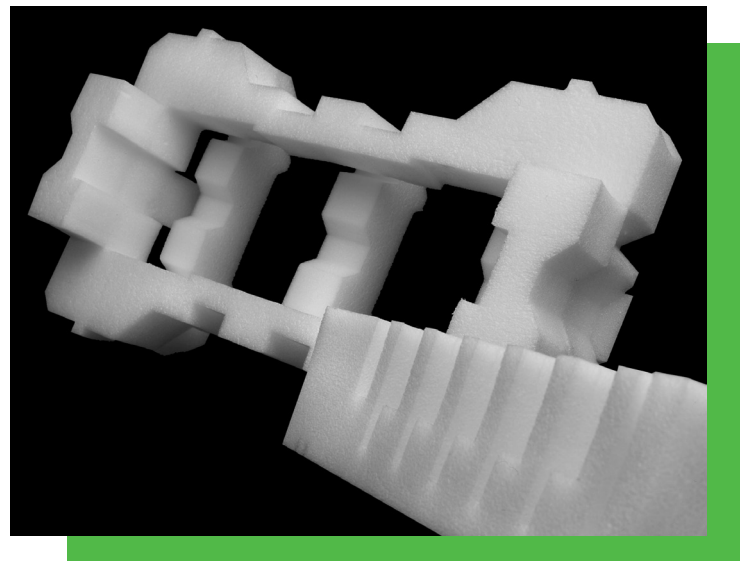

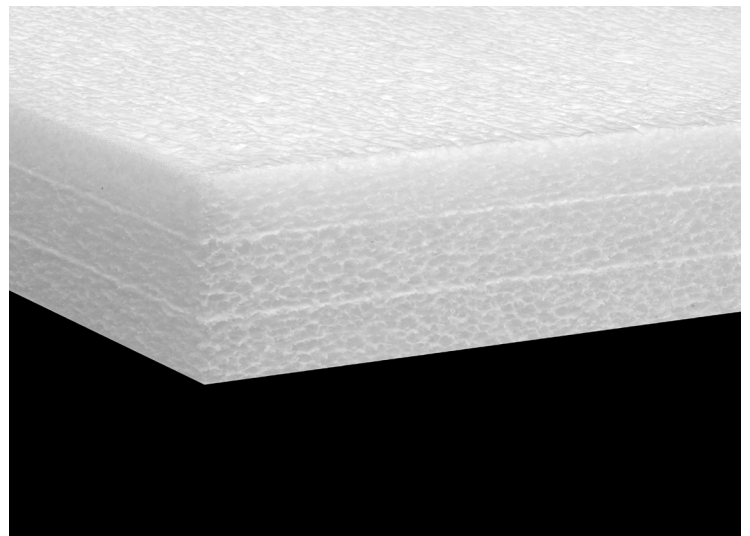

Polylam are extruded polyethylene foam planks laminated to reach different thicknesses in densities ranging from 1.2pcf up to 11pcf.

They can be used in many different applications where cushioning is needed, for protection of goods, flotation, construction and even insulation to mention a few.

Advantages:

- Provides access to a superior and wider variety of thicknesses
- Available in different measurements according to the density
- Can be customized according to our client's needs if volume parameters are met
- 100% Recyclable
- Competitive prices
