Polyfoam® expansion joint is used in the construction industry to isolate slabs, walls and concrete walls like columns or drainage pipes.

**BENEFITS**

- Low-cost equipment
- Special equipment not needed for its installation
- Easy to handle
- Prevents repair costs
- 100% waterproof
- Available in a variety of lengths and thicknesses
- Immediate availability in standard measurements
- Excellent resilience material

Prevent potential destructive force of concrete, producing damage to himself, we must provide a wide board of intervals that are sealed with Polyfoam®.

Material that can expand and contract with concrete movement, but at the same time it is waterproof, long-term lasting and does not allow any foreign material go between the boards.

- Easy manufacturing
- Regains shape after being subjected to compression
- Closed cell construction

**APPLICATIONS**

*CONCRETE SLAB

*WALLS

*COLUMNS

They can manufacture special sizes according to the project.

**THE SOLUTION WITH THE BEST PERFORMANCE**

The walls and columns, which are located in its own foundations, are deeper than the subsoil of slab, it does not move in the same manner as it does when a slab is reduced or expanded by aridity and temperature changes, or as when the subsoil is compressed a little.

Polyfoam cushions these changes by avoiding the fracture of the concrete slab.

As a manufacturer specialist of polyethylene foam we have registered the commercial trademark polyfoam looking to identify it easily in the market, in addition to granting a unique business identity that thanks to the quality and prestige of the company, it has become the reference name for requesting this material.

Our distributors are the only authorized to advertise our brand in the market.
